Cover: The picture on the cover shows (A) adsorption isotherms, (B) isosteric heat of adsorption and (C) adsorption energy distribution for macroporous poly(GMA-*co*-EGDMA). These parameters, estimated from IGC data using BET adsorption model, were used to study the surface characteristics of the polymer. Further details can be found in the article by A. B. Nastasović,* A. E. Onjia, S. K. Milonjić, Z. M. Vuković, and S. M. Jovanović on page 884.
